Assessment of the nasal bone

Dear Wolfgang Moroder,

Thank you for submitting your logbook of 3 images. I examined each image for the following criteria: magnification (head and thorax only), true mid-sagittal section, correct angle between the ultrasound transducer and the nose, and your assessment (see table below).

| Criteria | Image number | | |
|---------------------------------|---------------------|----------|----------|
| | 1 | 2 | 3 |
| Magnification | ✓ | ✓ | ✓ |
| Mid-sagittal section | ✓ | ✓ | ✓ |
| Transducer parallel to the nose | ✓ | ✓ | ✓ |
| User's assessment | ✓ | ✓ | ✓ |

Legend: ✓ = pass ✗ = fail -- = not possible to assess

Your images are satisfactory. Your software license will include the assessment of **nasal bone** in the risk calculation for chromosomal abnormalities and your name will appear on the list of sonographers certified for nasal bone assessment.

Best wishes,

Olga Torres Khoury
